Football 2026 - Week 4 - Overall Top 15 vs. MA'S MAN (11:47 PM ET -- 15/16 final, 1 in progress (tiebreaker), 0 ahead.)

Grey=differs from MA'S MAN. Small # under a pick=its win odds; % in header=field share against MA'S MAN (leverage). #=season rank, T=tied. Overall=season W-L. Chalk Rate=share of real-favorite picks, recency-weighted. Season Winning Probability/Top 2%/Top 3% (gold/silver/bronze)=chalk-rate-simulated odds of finishing the SEASON 1st, top 2, or top 3 (not just this week). Colored number row above the picks=that game's importance (1=most): add up every player who picked differently from this sheet's reference player on that game, each one counted at a weight set by THEIR rank in this table (#15 counts for 1 point, #1 counts for 15 -- currently linear, may shift toward the top as the season goes), then rank all 16 games by that total. A game splits several high-ranked players = high importance; a game only the bottom of the table disagrees on = low. On the Projected table, *=not in the Actual Top 15 (the two rosters are independent). 15/16 final; slash=loss.

Football 2026 - Week 4 - Overall Top 15 vs. DX2J (10:47 PM CT -- 15/16 final, 1 in progress (tiebreaker), 0 ahead.)

Grey=differs from DX2J. Small # under a pick=its win odds; % in header=field share against DX2J (leverage). #=season rank, T=tied. Overall=season W-L. Chalk Rate=share of real-favorite picks, recency-weighted. Season Winning Probability/Top 2%/Top 3% (gold/silver/bronze)=chalk-rate-simulated odds of finishing the SEASON 1st, top 2, or top 3 (not just this week). Colored number row above the picks=that game's importance (1=most): add up every player who picked differently from this sheet's reference player on that game, each one counted at a weight set by THEIR rank in this table (#15 counts for 1 point, #1 counts for 15 -- currently linear, may shift toward the top as the season goes), then rank all 16 games by that total. A game splits several high-ranked players = high importance; a game only the bottom of the table disagrees on = low. On the Projected table, *=not in the Actual Top 15 (the two rosters are independent). 15/16 final; slash=loss.

How We Figure Out Everyone's Odds

Football 2026 — Week 4 Picks Pool — written so anyone can follow it, no math background needed. Every number below is real and comes straight from this week's actual data.

1

Where the numbers come from

We don't guess, and we don't use a website's own computer prediction. We use the **real odds from DraftKings**, an actual sportsbook where real people bet real money on these games. If a game's odds are wrong, real bettors would be losing or winning money over it — that keeps the numbers honest.

2

Turning odds into a percentage

Sportsbooks show odds as a “moneyline” — a number like -225 or +185. A **minus** number means that team is expected to win (the bigger the number, the more likely). A **plus** number means they're the underdog.

The formula:

Favorite (minus number): $\text{chance} = \text{odds} \div (\text{odds} + 100)$

Underdog (plus number): $\text{chance} = 100 \div (\text{odds} + 100)$

Real example from this week — Atlanta @ New Orleans: NO is -148, so its raw chance is $148 \div (148 + 100) = 59.7\%$. ATL is +124, so its raw chance is $100 \div (124 + 100) = 44.6\%$.

Add those two up: $59.7\% + 44.6\% = 104.3\%$ — more than 100%! That extra bit is the sportsbook's own cut for running the bet (called the “vig”), and it's not a real chance of anything — we take it back out by dividing each number by the total:

NO = $59.7\% \div 104.3\% = 57.2\%$ • **ATL** = $44.6\% \div 104.3\% = 42.8\%$

Now they add up to exactly 100% — that's the fair, honest percentage we actually use for that game.

3

Replaying the week 20,000 times

Think of it like hitting “restart” on a video game, over and over. Each time, the computer decides every undecided game — but not by flipping a fair coin. It rolls a **loaded die** weighted to match that game's real percentage from Step 2, so a 66% favorite really does win about 66 times out of every 100 pretend replays. Games that have already actually finished always come out the same real way — no re-rolling those.

After each pretend replay, the computer checks everyone's picks against that replay's results and writes down: who got the most correct? That's the “winner” of that one replay.

Your Win% is simply: out of all 20,000 pretend replays, in how many of them were you the winner (or tied for it)? If you won 1,200 of the 20,000 replays, your Win% is $1,200 \div 20,000 = 6\%$.

4

Breaking ties with the tiebreaker number

Sometimes two or more people are tied for the most correct picks in the same pretend replay. When that happens, whoever's tiebreaker number guess is **closest to that replay's combined score** of the Monday Night game (NO vs. ATL) wins that replay instead of splitting it.

Since that game hasn't been played yet, each replay also has to imagine a realistic final score for it. We use the sportsbook's own point spread (NO by 2.5) and total (47.5 combined points) to center a believable guess, then add a little random wobble — real NFL scores aren't perfectly predictable, so neither is our pretend one.

Exactly where this comes from, no hand-waving:

- **Odds:** DraftKings sportsbook lines, via ESPN's odds page, fetched fresh at the start of each week and updated as games are actually played.
- **The simulation:** a real computer program (Python), 20,000 random trials, run fresh every time this page updates — nothing here is picked by hand.
- **This snapshot:** 11:47 PM ET.
- **What it can't know:** injuries or news that happen after the odds were fetched, and it treats every game as independent (no weather affecting two games at once, etc.).

Football 2026 - Week 4 - Overall Leaderboard (11:48 PM ET)

Every player in the pool, real season standings (left) and projected season finish (right) side by side -- ties never split at the cutoff on the left; the right is its own independent ranking (Season Winning Probability, whole pool), so a name's position and even presence can differ between the two.

How we're building toward season odds

Every week's sheet estimates **this week's** title odds via Monte Carlo. A **season-long** estimate needs a personal "**chalk rate**" (share of picks matching the real sportsbook favorite, recency-weighted) to simulate *likely* future picks.

Season Winning Probability (shown above) turns chalk rate into odds on a generic future game, Monte Carlo'd against everyone's real wins-so-far. Known gap: this only models weeks after this one.

Football 2026 Pool — Workflow Summary

The short version. For full detail (every file, every bug, every design decision), see `WORKFLOW.md`.

What this is

A friend-group NFL pick'em pool (~55 entrants). Each week, everyone picks all 16 games plus a tiebreaker guess (the combined score of Monday night's game). One combined PDF — six pages, covering both tracked players, the season standings, and a plain-English methodology explainer — is rebuilt and published every time a game's status changes, at a single stable link:

<https://dxgator116-gif.github.io/football-pool/masman.pdf>

The pipeline, in short

1. **Check ESPN** for every game not yet final (always the per-game page, always cross-verified a second way before trusting a "Final").
2. **Update** `picks_data.json` — the one file that holds the week's games, everyone's picks, and live results/odds.
3. **Regenerate all 6 sheets** with one script each, then **merge them** into the combined PDF.
4. **Verify page counts** (1 page per sheet, 6 combined) before publishing — never ship a broken layout.
5. **Push to GitHub Pages** and confirm the live file actually updated.

This repeats all week, every time there's new information, via scheduled automated checks during game windows (plus a safety-net check the following morning in case a game runs late into overtime).

What's in the combined PDF

1. **Picks Diff — MA'S MAN** — this week's picks, diffed against the field.
2. **Overall Diff — MA'S MAN** — top-15 season standings, two views (actual standings and projected finish), diffed against MA'S MAN.
3. **Picks Diff — DX2J** — same as #1, for DX2J.
4. **Overall Diff — DX2J** — same as #2, for DX2J.
5. **How The Odds Work** — plain-English explainer of the math, with that week's real numbers as the example.
6. **Overall Leaderboard** — the shared season standings, not tied to either player.

The two models behind the numbers

- **Weekly title odds:** a 20,000-trial simulation that replays the week's still-undecided games using real sportsbook odds, and reports how often each player ends up with the best record.
- **Season-long odds:** since future weeks' matchups don't exist yet, each player gets a personal "chalk rate" (how often they've picked the real favorite, weighted toward recent weeks), combined with this season's real favorite-win rate, then simulated forward the same way.

A few of the bigger design calls

- Losing picks are marked with a simple navy slash through the pick — not a wall of red.
- A bold box marks a player's "must-win" picks — games where losing that one pick alone would mathematically end their week.
- The season-standings sheets show the top 15 by real wins, with ties at the cutoff never split (a golf-style cut line, not a fixed headcount).
- Each season-standings sheet now shows the top 15 two ways — by real standings, and by projected finish — plus a color-coded row ranking that week's games by how much they could shake up the standings.
- Every "Final" result gets cross-checked a second way before it's recorded — this has caught real fabricated results more than once.

Full detail, including every file's role and the history behind each decision, is in `WORKFLOW.md`.
